

# **CSE 2600**

# **Intro. To Digital Logic & Computer Design**

Bill Siever  
&  
Michael Hall

**5W+H**

**(Questions welcome at any time)**

# Who?

- Us: Bill Siever & Michael Hall
  - Bill: Teaching Prof. In CSE
  - Michael: Lecturer in CSE/ESE

# Who?

- You?
  - Mix of Computer Engineering, Electrical Engineering, and C.S. Majors
  - Some in Dual Degree program
- Prerequisites: Intro. To Computer Science (Programming)
- Other related courses? 1302? 3601? 3602?

# What?

- Digital Logic!
  - Digital: Usually about binary-based systems
    - Q: Why binary?
- Computer Design
  - Focus on Architecture: How Digital Logic is Used for a Modern Computer

# When?

- Class (now): Tues/Thurs 2:30-3:50
- Instructor & TA Office Hours: TBD

# Where?

- Jumble 120

# Why?

- Digital logic is critical to
  - All of computing
  - Recent advances in A.I./M.L.
  - Understanding system-level behavior of computers

# Why?

- Deep understanding benefits:
  - Design at all levels (hardware, software/API)
  - Debugging
- Integration of knowledge
  - Bring together lots of classes / topics

# How?

- Overview of Syllabus / Schedule / Webpage
  - <https://wustl.instructure.com/courses/165433>

# How?

- Summary:
  - For credit: Exams, Homework, Studios, Prep work summaries
  - Related: Lectures/discussion, Reading, Resources/Videos

# Tools / Resources

- Website vs. Canvas
- Canvas, Gradescope, Github
- Forum: Piazza

# Challenges

- Significant change in content from some prior years
  - Stable, but still being refined
  - Hardware / platforms for topic can be finicky
    - That's common in engineering
- We'll focus on helping you learn the critical concepts despite setbacks

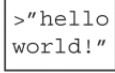

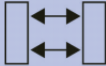

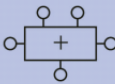

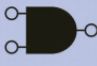

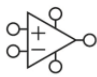

# Chapter 1 Sections

1. The Game Plan
2. Managing Complexity
3. Digital Abstraction
4. Number Systems
5. Logic Gates

# Course

But  
Architecture  
before Micro

focus of this course

Application Software		programs
Operating Systems		device drivers
Architecture		instructions registers
Micro-architecture		datapaths controllers
Logic		adders memories
Digital Circuits		AND gates NOT gates
Analog Circuits		amplifiers filters
Devices		transistors diodes
Physics		electrons

# Abstraction

- Digital discipline
  - Discrete values
    - Moreover, *binary* (0/1; false/true; Off/On; 0v/3v; No/Yes; ...)
      - Smallest unit of information: a binary digit. Also-know-as a *Bit*
- (Mostly) Starting at gate level

# Goals Today

- Review / Learn (Unsigned) Binary Representations
- Learn Binary Addition
- Review Binary Operations
  - Consider Machines for Binary Operations

# Binary Basics: Number Line

# Conversions

# Place Value: Base 10

## Example: 123

Digits	1	2	3
Place Value	100	10	1
Place Value In terms of Base	$10^2$	$10^1$	$10^0$
Expansion	$1 \times 10^2$	$+2 \times 10^1$	$+3 \times 10^0$

# Place Value: Base 2

## Example: $110_2$ (or 3'b110)

Digits	1	1	0
Place Value ( <i>Decimal</i> )	4	2	1
Place Value In terms of Base	$2^2$	$2^1$	$2^0$
Expansion	$1 \times 2^2$	$+1 \times 2^1$	$+0 \times 2^0$

# Easy Conversion: Binary to Decimal

Place Value (Decimal)	128	64	32	16	8	4	2	1
Place Value In terms of Base	$2^7$	$2^6$	$2^5$	$2^4$	$2^3$	$2^2$	$2^1$	$2^0$

**Problem: What is the decimal value of  
5'b10011**

Place Value (Decimal)	128	64	32	16	8	4	2	1
Place Value In terms of Base	$2^7$	$2^6$	$2^5$	$2^4$	$2^3$	$2^2$	$2^1$	$2^0$

# Easy Conversion: Decimal to Binary

## Greedy Algorithm Approach: Right to Left

1. Start with value  $n$
2. Find the exponent,  $k$ , of the *largest* power of 2 that is *smaller* than  $n$ .  
(i.e., first power of 2 that can be subtracted without going negative)
3. For  $k$  down to 0:
  1. If  $2^k \leq n$ 
    1. Write down a 1 (and move right)
    2.  $n = n - 2^k$
  2. Else
    1. Write down a 0 (and move right)

# Example: Convert 27 to binary (With the greedy approach)

- First power of 2 less than 27

- 16 ( $2^4$ )

- $n = 27 - 16 = 11$

- $n = 11 - 8 = 3$

- $n = 3 - 2 = 1$

- $n = 1 - 1 = 0$

Place Value	128	64	32	16	8	4	2	1
Place Value	$2^7$	$2^6$	$2^5$	$2^4$	$2^3$	$2^2$	$2^1$	$2^0$
Result				1	1	0	1	1

# Arithmetic

# Decimal Addition

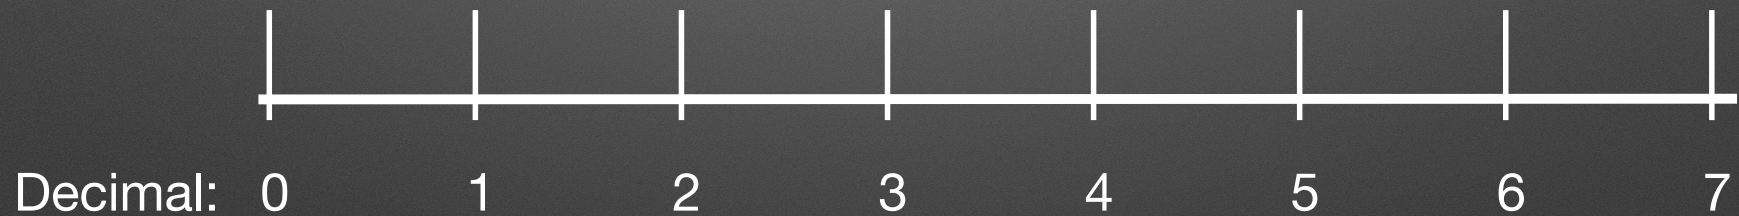

+	1	2	3	4	5	6	7	8	9	10
1	2	3	4	5	6	7	8	9	10	11
2	3	4	5	6	7	8	9	10	11	12
3	4	5	6	7	8	9	10	11	12	13
4	5	6	7	8	9	10	11	12	13	14
5	6	7	8	9	10	11	12	13	14	15
6	7	8	9	10	11	12	13	14	15	16
7	8	9	10	11	12	13	14	15	16	17
8	9	10	11	12	13	14	15	16	17	18
9	10	11	12	13	14	15	16	17	18	19
10	11	12	13	14	15	16	17	18	19	20

# Decimal Addition: Bunch of Rules

## Rules just “encode” moving right on the number line

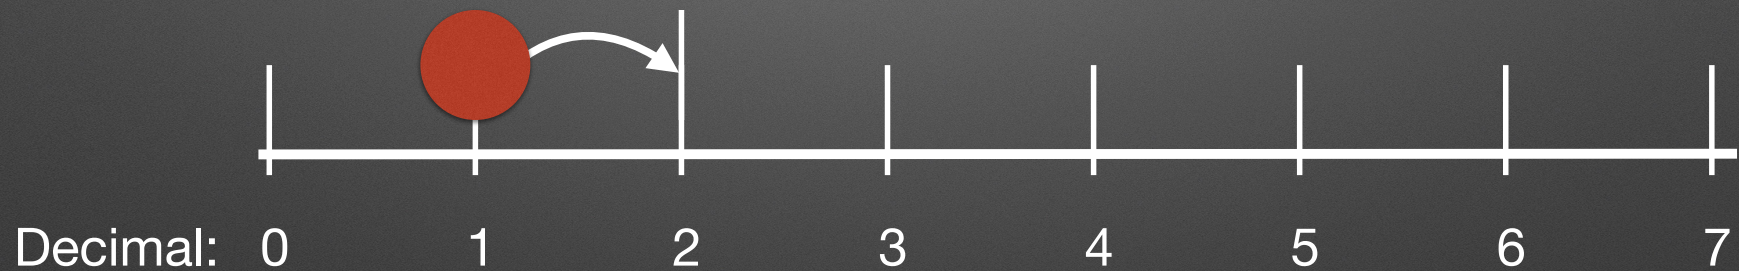

Ex:  $1+2$

# Decimal Addition: Bunch of Rules

Rules just “encode” moving right on the number line

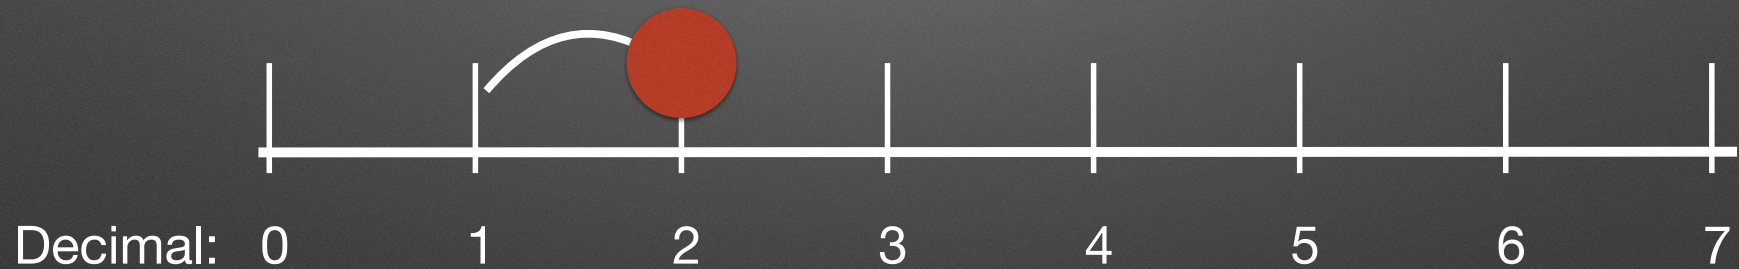

Ex:  $1+2$

# Decimal Addition: Bunch of Rules

Rules just “encode” moving right on the number line

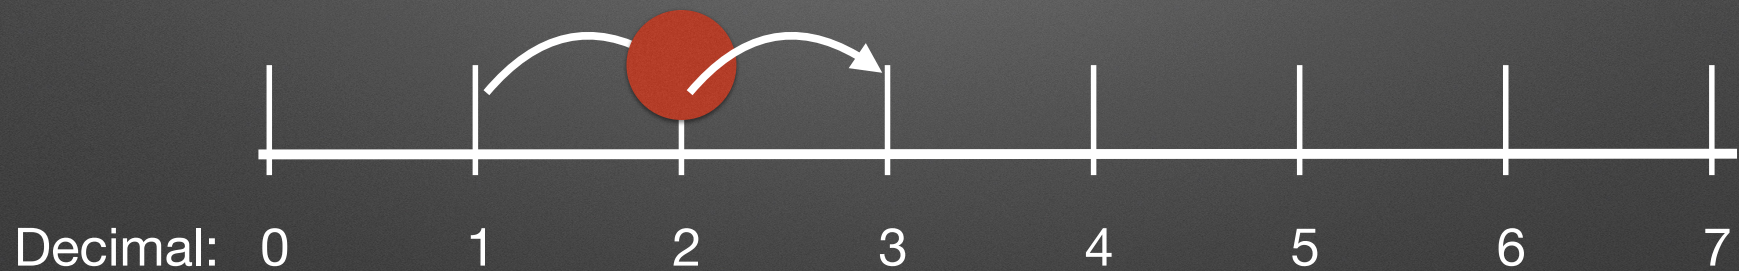

Ex:  $1+2$

# Decimal Addition: Bunch of Rules

Rules just “encode” moving right on the number line

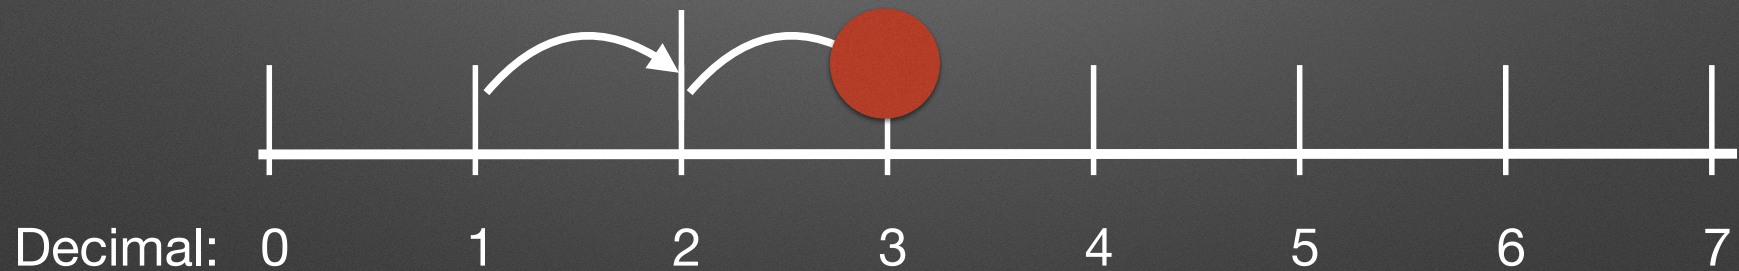

Ex:  $1+2$

# Decimal Addition: Bunch of Rules

Rules just “encode” moving right on the number line

Ex:  $1+2$

# Binary Addition Rules

- Condensed
  - No ones:  $0+0+0 = 00$
  - One one:  $0+0+1 = 01$
  - Two Ones:  $0+1+1 = 10$
  - Three Ones:  $1+1+1 = 11$

# Binary Addition Rules: Fully Elaborated

0+ 0+ 0	=	00
0+ 0+ 1	=	01
0+ 1+ 0	=	01
0+ 1+ 1	=	10
1+ 0+ 0	=	01
1+ 0+ 1	=	10
1+ 1+ 0	=	10
1+ 1+ 1	=	11

# Problem

- Add  $4'b1010 + 4'b0011$

# **Review: Operations on Booleans**

# Review: Boolean Logic Operations

LOGIC OPERATION	COMMON PROG. LANG. SYMBOLS	FIRST-ORDER LOGIC	DIGITAL LOGIC
And	&&, and	$\wedge$	$*$ (multiplication)
Or	, or	$\vee$	$+$
Not / Negation	!, not	$\neg$	$/$ (also line over)

# Gates: Conceptual Machines for Boolean Ops

LOGIC OPERATION	COMMON PROG. LANG. SYMBOLS	FIRST-ORDER LOGIC	DIGITAL LOGIC	GATE

# Gates: Machines for Boolean Ops

(A look at “Computer Engineering for Babies”)

# For Thursday

- Read Chapter 1: 1.1-1.5
  - Complete the questions (Canvas) before 11am (not officially due)
  - Future prep work questions are 11:59pm on Mondays
  - Reading is almost all of Chapters 1-7. Can work ahead!

**Homework #1 Posted!**

**Due next Tuesday (Jan. 20th)**
